

geodyna® optima II RFV

Fully Automated Diagnostic Wheel Balancing System

Recommended by
GM

Laser based 3D profiling provides automatic diagnostic analysis and highly accurate wheel balance results

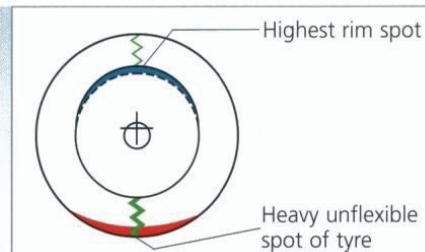

geodyna® optima II RFV

Fully Automated Diagnostic Wheel Balancing System

The Run-out Force Vectoring (RFV) minimises vibrations and radial forces, ensuring a smooth ride.

Run-out Force Vectoring

- When combined with precise wheel balancing, the Run-out Force
- Vectoring (RFV) diagnostics assures uniformity based total ride quality.
- In a radial run-out measurement RFV detects the radial forces caused by non-uniformity of the tyre/wheel assembly. Match-mounting ensure a smooth ride.

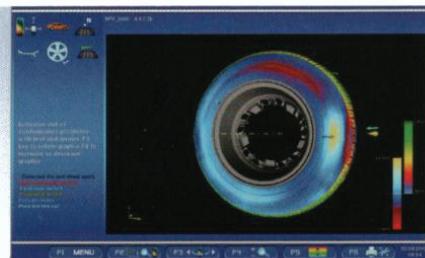

Run-out measurement

Hundreds of thousands of measurement points are taken with a resolution of 0.1 mm.

Laser-based run-out detection

- Quickly and easily provides geometry-related measurements, using the unique 3D imaging technology.

Error-proof results and state-of-the-art analysis provide customer satisfaction

Fully automatic inputs of all data remove the chance of errors and inaccurate results.

Six centering cones

- High-precision cones ensure accurate measurement.
