

geoliner® 550 prism ELITE

**ELITE – enhanced features
enhanced service for your customers**

geoliner® 550 prism ELITE

The wheel aligner geoliner 550 prism is now also available as geoliner 550 prism ELITE. This configuration offers the following additional features:

Rolling run-out compensation of the vehicle

With this software feature it is possible to perform run-out compensation without jacking up the vehicle. It is only necessary to roll the vehicle back and forth.

Owing to this feature there is no need for changing vehicle height so that the analysis of measured data is absolutely clear to the operator.

It is also possible to perform split rolling run-out compensation.

Measurement of vehicle dimensions

This feature allows to measure set-back on front and rear wheels and to deduct therefrom the wheel base difference.

Those quick diagnostic features are an optimum supplement for customer services.
