6. **Clever Use and saving** work space
7. **Speed** and flexibility
8. **Health** protection of workers
9. **Affordable** with wide usage
10. **Long lifetime period**, high quality

A description of the jack functions

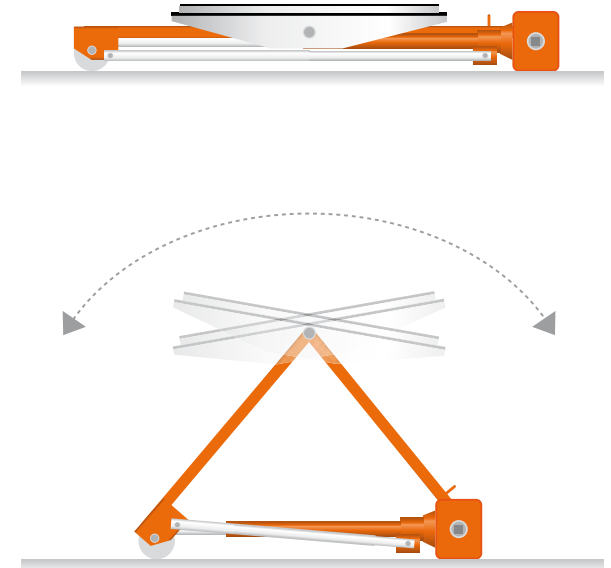

A vehicle is being risen at the point of gravity centre below threshold beams. The jack is purely mechanical, powered easily by an electric hand drill. 2 gearboxes of advanced construction using trapezoidal screws inside the frame ensure quick raising up or putting the vehicle down. The most unique advantage is a fact that a mechanic can smoothly turn over the lifted vehicle anytime he needs. This feature is allowed by raising the vehicle in its centre of gravity. The jack is fully mobile and can be transferred anywhere. It can be used promptly and immediately without a necessity of any building modifications.

99%

The jack is able to use at 99% of all vehicles; automobile, off-road, pickup, van, minibus categories.

It is suitable for all mechanical work, car body and painting work, vehicles demonstration or washing vehicles.

Technical data

LOADING CAPACITY	3000 kg
DIMENSIONS	1635 x 1300 x 120 mm
WEIGHT	43 kg
LIFT	60 cm
LIFTING SPEED	25 sec.
